Introduction to PROMPT Technique Workshop

26th – 28th August 2024 (MON – WED)

About PROMPT

PROMPT, an acronym for PROMPTS for Restructuring Oral Muscular Phonetic Targets, is a multidimensional approach to speech production disorders that has come to embrace not only the well-known physical-sensory aspects of motor performance, but also its cognitive-linguistic and social-emotional aspects. PROMPT is about integrating all domains and systems towards positive communication outcomes. It may be used (with varying intensity and focus) with all speech production disorders from approximately 6 months of age onward. To achieve the best outcome with PROMPT it should not be thought of or used mainly to facilitate oral-motor skills, produce individual sounds/phonemes or as an articulation program but rather as a program to develop motor skills in the development of language for interaction.

In this course you receive specialized training from a PROMPT Instructor with extensive clinical experience that you can apply right away. Following the completion of this course you will be able to immediately use different levels of PROMPT technique (Parameter, Surface, Complex, Syllable) in your practice. In other words, you will be able to use your hands to help clients move their articulators. You will walk away with an understanding of dynamic systems, treating the whole child, and applying the PROMPT assessment and treatment planning process.

Intro primarily focuses on the motor speech system (Physical-Sensory Domain). Highlights include an evidenced-based framework for identifying motor breakdowns, determining treatment targets, designing treatment sessions, applying technique through interactive case studies and practice opportunities. Easy-to-use resources are provided to allow you to put what you learn into practice. Once completed, caregivers can find you on our website as being PROMPT trained, which can help you grow your practice.

This workshop focuses on teaching the technique of PROMPT. The workshops are hands-on tactile-kinesthetic input and emphasizes the need to integrate this into a holistic therapy approach.

Learning Outcomes:

At the end of the Introduction to PROMPT: Technique workshop, participants will be able to:

- Describe the philosophy of PROMPT and its application principles.
- Apply different levels of PROMPTing (Parameter, Syllable, Complex, Surface) as appropriate to the selected cases.
- Analyze speech motor subsystems using the Systems Analysis Observation and Motor Speech Hierarchy.
- Design interactive therapy activities that utilize all of the above.
